

To Whom It May Concern,

I am writing to recommend Stefan Cruceru, who served as a Technical Systems Engineer at Clear Cloud Solutions (CCS).

Stefan operated at the intersection of engineering, field execution, and system integration, which is not an easy role to fill. He consistently demonstrated the ability to translate complex system requirements into practical, deployable solutions across access control, video surveillance, and integrated security environments.

What set Stefan apart was his ability to think beyond individual components and focus on how systems actually perform in real-world conditions. He understood configuration discipline, system dependencies, and the operational impact of design decisions, which made him especially effective in multi-site and high-reliability environments.

He was also dependable in execution. Whether supporting deployments, troubleshooting issues in the field, or working through integration challenges, Stefan approached problems methodically and stayed engaged until they were resolved.

Stefan was impacted by a recent workforce reduction driven by a slowdown in project volume, not by performance. He made meaningful contributions to our team and would be a strong addition to any organization requiring a capable, practical systems engineer.

If you would like additional context, I would be happy to speak directly.

Sincerely,

Michael Gonzalez
Chief Technology Officer
Clear Cloud Solutions
